# **Developing Web Applications Using Angular**

**Duration:** 5 Days (Face-to-Face & Remote-Live), or 35 Hours (On-Demand)

Price: \$2495 (Face-to-Face & Remote-Live), or \$1495 (On-Demand)

**Discounts:** We offer multiple discount options. <u>Click here</u> for more information.

**Delivery Options:** Attend face-to-face in the classroom, <u>remote-live</u> or <u>on-demand</u>

training.

# Students Will Learn

- Using TypeScript and ECMAScript 6 to create components
- Using directives and components to define UI elements, routes and screens
- Working effectively with component lifecycle events
- Injecting dependencies to lessen coupling and increase testability
- Unit testing Angular applications with Karma and Jasmine

- Using property binding to link DOM elements with model data
- Building Single Page Applications using Angular
- Integrating forms with Angular
- Organizing code using modules
- Communicating with RESTful Web services

# **Course Description**

This hands on programming course provides a thorough introduction to the Angular Framework for the purpose of web application development. Attendees will learn the fundamental skills necessary to use Angular for building web applications and the MVVM (Model-View-ViewModel) design pattern. Topics include using TypeScript and ECMAScript to create object-oriented Angular applications, extending HTML by creating reusable UI components, implementing data-binding, designing and using custom structural and attribute directives, as well as creating and using Angular pipes for formatting and transforming data in the UI. Students will explore creating UX's (User Experiences) by designing Web animations and implementing both template-driven and reactive style forms. Students will learn to use Angular routing to create SPA's (Single Page Applications). The Angular training course includes coverage of using DI (Dependency Injection) and Angular services to provide business and data-access logic to the application, both locally as well as communicating with RESTful web services to provide CRUD database operations.

Comprehensive hands on exercises are integrated throughout to reinforce learning and develop real competency.

# Course Prerequisites

Knowledge of HTML, CSS and JavaScript equivalent to attending the <u>Website Development</u> <u>with HTML5, CSS and Bootstrap</u> and <u>JavaScript Programming</u> courses. Knowledge of jQuery is helpful, but not required.

### Course Overview

# Overview of Angular and the MVVM Design Pattern

- Features and Benefits of Angular
- Angular Architecture
- MVVM Design Pattern Overview
- Downloading Angular
- Choosing an IDE
- Creating a Simple Application with Angular

### **Working with ES6 (ECMAScript)**

- Enhancements to Legacy JavaScript
- New let to Declare Variables
- Block Scoping
- Using for of Loops
- Literals and Strings
  - Extended Literal Support
  - Template Literals
  - Object Literal Changes
- Function Enhancements
  - Default Parameters
  - Rest and Spread Operators
  - Arrow Functions/Lambdas

### **Using Visual Studio Code**

- Downloading and Installing Visual Studio Code
- Generating Angular Projects with the CLI (Angular Command Line Interface)
- Angular Project Structure, Files and Configuration
- Debugging Angular Applications
- Using the Terminal Window

### **Working with TypeScript**

- Types
  - Working with Built-In Types
  - Custom Types
- Setting Up and Using Node.js
- Transpiling TypeScript into JavaScript
- TypeScript Compiler Configuration
- TypeScript Functions
  - Default and Optional Parameters
  - Function Overloading
  - Parameter Types and Return Types

#### **Angular Modules**

- Using Modules to Create an Application
- Default Modules
- Bootstrapping an Application
- Exporting Classes, Functions and Values
- Limiting Scope
- Grouping Modules
- Specifying Module Dependencies
- Organizing Code Files
- Module Testing
- Best Practices

#### **Angular Components**

- Component LifeCycle
- Component Templates to Define Views
- Using Decorators to Define MetaData
- Styling

# **Component Templates and Data Binding**

- Basic Data Binding Concepts
- Interpolation
- One-Way Property Binding

- Per-Component Styling
- Defining Global Styles in angular.json
- Adding Bootstrap Framework to an Angular App
- View Encapsulation
  - ViewEncapsulation.ShadowDom
  - ViewEncapsulation.Emulated
  - ViewEncapsulation.None
- Referencing DOM Elements with ElementRef
- Lifecycle Hooks
  - OnInit, OnDestroy, OnChanges, DoCheck

NgIf, NgFor, NgClass, NgStyle,

Using the Renderer2 Service

- AfterContentInit, AfterViewInit
- AfterContentChecked, AfterViewChecked
- Change Detection

Built-In Directives

**Angular Directives** 

Passing Data to Components

NgSwitch, etc.

Building Custom Directives

Attribute Directives

Structural Directives

■ ElementRef

- Two-Way Property Binding
- Event Binding
- Custom Binding
  - Exposing Properties and Events to Parent Controls
  - Custom Property Binding
  - Custom Event Binding

# **Working with Pipes**

- Text Casing Pipes
- Formatting Numbers and Dates
- Internationalization and Cultures
- Restricting Data Collections with slice
- Custom Pipes
  - Implementing the PipeTransform Interface
  - Pure vs Impure Pipes
  - Passing Parameters to Pipes

## **Defining and Consuming Services**

- Dependency Injection
  - Registering Providers with the Injector
  - Changes to Injection in Angular
- Creating a Service
- Consuming a Service

### **Working with Web Services**

- Using HttpClient
- Importing the HTTP Module
- Creating Requests
- Processing Responses
- Web API
- Using PostMan to Test the Server-Side Service
- Interacting with a RESTFul Service
  - POST Requests
  - DELETE Requests
  - PUT Requests
  - HEAD Requests
- Dealing with CORS (Cross Origin Resource Sharing)

# **Asynchronous Programming in Angular Angular Forms**

- Reactive Programming Model
- The RxJs Library

- The ngNativeValidate Directive
- HTML novalidate Attribute

- Observables
- Observers
- Subjects
- Subscriptions
- Operators
- Using Operators
  - Creation Operators
  - Filtering of Data Operators
  - Conversion of Data Operators
  - Math and Aggregate Operators
  - Utility Operators
  - Pipeable Operators
- Using the async Pipe
- Changes to RxJs in Version 6

### ■ Template Driven Forms

- ngForm and ngModel in Forms
- Input and Output Properties
- Reactive-Driven/Model-Driven Forms
  - FormGroup
  - FormControl
  - FormArray
  - Validators Class
- Using the FormBuilder Factory
- Working with Form State
- Client-Side Forms Validation

### **Angular Routing and Navigation**

- Overview of Routing
- Implementing Single Page Applications (SPAs)
- Location Strategies
- Client-Side vs Server-Side Routing
- Working with the Component Router
- Adding Router Imports
- Performing Router Configuration
- Using Router State
- Redirects
- Routing Parameters
- Router Lifecycle Events
- Nesting Routes
- Routing Guards
  - Defining a Guard
  - Registering Guards
  - Securing Routes
  - CanActivate **Guard**
  - CanActivateChild Guard
  - CanDeactivate **Guard**
  - CanLoad **Guard**

### **Unit Testing and TDD with Angular**

- TDD vs End-to-End Testing
- Jasmine Testing Framework
  - Defining Expectations
- Running Tests in Karma
- Using the Angular Unit Test Framework
  - Fulfilling Dependencies
  - Mocking Out Data
  - Creating Testing Fixtures
- Testing Services and HTTP
- Using Test-Doubles (Mocks, Stubs and Spies)
- Testing Components
- Testing Forms

### **The Angular Animation System**

- The Web Animations API
- States and Transitions
- Entering and Leaving
- Animating Properties
- KeyFrames
- Parallel Animation Groups

# **Building and Deploying Applications**

- Developing a Deployment Strategy
- Managing Dependencies
- Tree Shaking
- Transpiling
- Linting

Hands On Technology Transfer The Best Way to Transfer Technology Skills
